Revenue Optimization

Clinicians, administrators and hospital systems are challenged by continually evolving revenue models, the need for more data, and overwhelmed back-office processes.

MediMobile's AI and suite of products are focused on automating processes and maximizing billing, while reducing costs.

Automated Coding

MediMobile is the first and only charge capture software suite to create and successfully use Artificial Intelligence. We call our solution Genesis.

Workflow Tools

MediMobile is the first charge capture software suite to introduce configurable workflow tools allowing our customers to customize our software to their processes.

Real Time Data

MediMobile is the first and only charge capture software suite to create real-time data feeds allowing clinicians, coders and billers access to clinical documentation in one application.

Our goal is to eliminate charge capture from our clinicians daily workflow!
